Chance Pham - Software Engineer

SKILLS

Python, JavaScript, React, HTML, CSS, Django, MERN Stack (MongoDB, Express.js, React, Node.js), jQuery, Bootstrap ,Full-Stack Development, Microservices, Domain-Driven Design (DDD), FastAPI, Scalable Web Applications, Real-Time Applications, GitLab, Continuous Integration/Continuous Delivery (CI/CD) Pipelines, Cloud-Native Applications, Agile Environments. Project coordination, organization, scheduling, event planning, program management, Microsoft 365, Google Workspace, communication, collaboration, leadership, mentorship, workflow management,

EDUCATION

Hack Reactor — JavaScript and Python Software Engineering Certification.

Completed an intensive software engineering certification focused on full-stack development using JavaScript and Python, building real-world applications and mastering frameworks like React and Django.

The Last Mile — MERN Development/Frontend Fundamentals Certification.

Gained hands-on experience with the MERN stack, learning frontend fundamentals and contributing to projects that strengthened my skills in modern web development.

EXPERIENCE

SuperIntro | Fullstack AI Software Engineer Intern | **November 2024 - January 2025**
- Contributed to the development of a matchmaking application using the MERN stack (MongoDB, Express.js, React, Node.js), focusing on enhancing functionality and performance.
- Redesigned and optimized pages using Figma to improve user experience, ensuring consistency and alignment with the application's overall design.
- Collaborated with team members using Google Workspace to track tasks, share updates, and maintain seamless communication throughout the project.

Hack Reactor | Software Engineering Apprentice | **May 2024 - September 2024**
- 800+ Hours in Full-Stack Development: Built web applications with FASTapi, Python/Django, HTML/CSS, JavaScript, React, and MongoDB.
- Led a team in architecting and developing a *social media application* using the FARM stack, featuring RESTful asynchronous APIs for functionalities such as a like and reports tracker, comment system, and image repository.
- Co-led the development of a comprehensive *car dealership application* with inventory management and sales functionalities. Spearheaded the implementation of a PostgreSQL database, and using Django for the backend and React for the frontend.
- 5+ Scalable, Real-Time Applications in Advanced Engineering: Applied microservices, HTTPS, FastAPI, and GitHub Copilot.
- 3+ Cloud-Native Applications in DevOps & CI/CD: Continuous integration/delivery pipelines with GitLab in agile environments.

The Last Mile | Technical Assistant | **December 2022 - March 2023**
- Over 1,000 hours of HTML, CSS, JavaScript, jQuery, Bootstrap, MongoDB, ExpressJS, React, and Node.js, along with essential libraries and plugins.
- 200+ hours completed in graphic design using Affinity Designer to create visually appealing web applications, graphics, and logos.
- Facilitated the entire attending cohort's successful completion of the program providing troubleshooting support and explaining complex concepts.
- Offered mentorship to students, enhancing their learning experience and understanding of the material.
